

Environmental Policy Statement

Pembroke Engineering was established in 1977 and has since manufactured and installed products for both the domestic and commercial sectors. Manufacturing in stainless steel, aluminium and steel, with various finishes including galvanizing, painting or powder coating. We work with both public and private sector clients and undertake a range of contracts in multiple sectors, as such we have built an extensive portfolio of products and services. We are QMS registered to ISO9001-2015 and have achieved our UKCA EN1090 for structural steelwork and aluminium. We pride ourselves on being able to provide a complete service to our customers including offering a full design and build service with structural calculations if required.

We take pride in delivering a quality service, and in adding value to the local community and the wider environment. As such we are committed to proactively managing our environmental and sustainable development impacts. We abide by all relevant legislation and codes of practice, and are committed to pollution prevention and the continual improvement of our sustainability impacts.

Our key areas of improvement focus on site energy efficiency, waste management and the procuring of raw materials. Specifically, we plan to:

- Monitor & manage our utilities, specifying energy and water efficient fixtures, fittings and equipment.
- Ensure all employees understand the importance of good environmental stewardship, and deliver regular training to support this.
- Record electricity, water and gas consumption to identify wastage and gauge the effectiveness of improvements made.
- Implement the waste hierarchy in all we do, seeking opportunities to improve both design and processes.
- Actively seek opportunities to reduce packaging in our supply chain.
- Maintain a clean and tidy site, carefully managing and eliminating sources of nuisance and pollution.
- Introduce route planning & fuel efficient driver training for all our drivers
- Wherever possible support local trades and suppliers, reducing mileage and increasing our contribution to the local economy.
- Employ locally and invest in our workforce.

We will regularly review our progress and take remedial action in the event of us falling short of our aims & objectives. This document is a living policy, reviewed annually, and we welcome the input and comments of customers, suppliers and employees.
